DETAILED ACTION

Election/Restrictions

1. Claims 5, 6, 19-22 and 34-36 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7. Further, claims 13, 14, 27, 28 and 29, drawn to a spacing system which uses a spring, or a plurality of biasing elements, are not directed to the elected species, and are also withdrawn.

Specification

2. The substitute specification, filed February 12, 2002, has been entered.

Response to Amendment

3. The preliminary amendment, filed February 12, 2002, has been entered.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4, 7-12, 18, 23-26, 33 and 37 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by the Precision Pitch Spacing System, (PPSS) iTi Industrial Tools Incorporated, admitted as prior art by applicant, specification page 5, 0013 and figure 2, and further detailed in the document submitted by applicant in support of the admitted prior art. PPSS discloses a shaped flange comprising two parts, support

Art Unit: 3723

member **6**, and spacer member **16**, retention element **18**, dicing saw blade **50**, positioned between the support member and the retention element, and at least one biasing element **12** located adjacent the retention element and opposite the blade to bias the retention element against the blade. The applied prior art is shown as a ganged saw comprising a plurality of PPSS systems. The biasing member is a compressing ring, which the examiner considers to be an O-ring as broadly claimed.

Allowable Subject Matter

6. Claims 15-17 and 30-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record does not disclose or fairly teach a retention feature which comprises a recess to receive at least a portion of the biasing element. PPSS discloses a biasing element that extends from **16** radially almost the length of **18**. There is no need for a retention feature.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other ganged saws are cited of interest.

8. Any inquiry concerning the content of this communication or earlier communications from the examiner should be directed to M. Rachuba whose telephone number is (703) 308-1361. The examiner can normally be reached on Monday through Friday from 8:30 AM to 4:00 PM.
